PROFESSIONAL SUMMARY

Backend-focused Full-Stack Developer with hands-on experience building and optimizing web platforms using PHP/MySQL, Python/Django, Java/Spring, and modern JavaScript stacks. Strong background in responsive UI, server-side development, and solving production UX issues. Proven ability to convert static sites into dynamic, data-driven applications and ship client-ready features.

EDUCATION

SAL institute of technology and Engineering Research: B.E. in Computer Science (Jun 2024 – Jul 2027)

Government Polytechnic, Gandhinagar: Diploma in Information Technology (Sept 2021 – May 2024) | CGPA: 8.87

Nest Public School: SSC (June 2020 – May 2021) | 79.53%

PROFESSIONAL EXPERIENCE

AI/ML Trainee: bEdge Tech Services (June-July 2026)

- Structured tailored technical training tracks and candidate onboarding paths using Python/tensorflow; implemented resume-aligned tool deep-dives and resolved individual core competency gaps to accelerate team productivity.
- Guided end-to-end project development with scalable ML architectures and pipeline optimization utilities, improving real-world application deployment readiness and adding advanced features like automated data preprocessing, model evaluation metrics, and API integrations.

Freelance Full-Stack Developer: FinMentor (2025)

- Developed dynamic, data-driven expert directory and profile pages using PHP/MySQL; implemented secure parameterized queries and resolved routing and UX bugs to enhance user experience.
- Redesigned UI components with responsive breakpoints and vanilla JS utilities, improving mobile usability and adding interactive features like carousels, FAQ toggles, and QR popups.

Participant: GTU Ideathon 2025

- Developed backend APIs and integrated an AI-powered chatbot using Node.js and Google Gemini API for Agri-Sakha, a farmer-centric platform.
- Ensured seamless real-time conversational support and robust error handling for enhanced user experience.

PROJECTS

FinMentor (PHP, MySQL, HTML/CSS, JavaScript)

- Focus: converting static layouts to dynamic, database-driven components, improving UX and mobile responsiveness.

Sentinel (Python, Apache Kafka, PostgreSQL, Docker)

- Built a real-time event-driven financial monitoring system using a microservices architecture, streaming live Bitcoin prices through Kafka for processing and persistent storage in PostgreSQL.

Bug-Tracker (Django, PostgreSQL, HTML/CSS)

- Built a multi-user issue reporting and tracking system with role-based dashboards and streamlined assignment flows.

Fake News Detection App (Django, Python, ML)

- Integrated an ML classifier into a Django app to provide real-time news credibility checks and a simple user interface for submissions.

Task Manager (React, TypeScript, Node.js)

- Developed a task tracking app with CRUD operations, user assignment, and progress monitoring for small teams.

Agri-Sakha (JavaScript, Node.js, MongoDB)

- Created REST APIs and scalable backend infrastructure for a farmer services platform.
- Integrated AI chatbot backend leveraging Google Gemini language model to provide real-time assistance.

SKILLS

Languages: Python, Java, JavaScript, PHP, SQL, TypeScript

Backend: Django, Spring Boot, Hibernate, Node.js, PHP

Frontend: React (Vite), HTML5, CSS3, Vanilla JS

Datastores: MySQL, PostgreSQL, MongoDB

Tools & Platforms: Docker, Git

Messaging & Distributed Systems: Apache Kafka

Concepts: REST APIs, Microservices, Event-Driven Architecture, Authentication, Responsive Design, SQL, Basic ML Integration

CERTIFICATIONS & ACHIEVEMENTS

- **Python Data Structures** – University of Michigan

- **Project Development using Java** – Udemy

- **Hackathon Participant** – Gujarat Vibrant Hackathon (Nov 2023), Ideathon (Apr 2025)
